

⚠️ 11 Additional Operational Gaps Identified in This Review

- CRITICAL** **OTP deliverability to Yahoo Mail PH** — common among target users. Needs custom SMTP with warmed-up domain (not Supabase default SendGrid).
- CRITICAL** **Webhook idempotency for PayMongo** — same payment webhook can fire twice on retry. Handler must deduplicate by payment_id before processing.
- CRITICAL** **OR number generation legality** — BIR requires sequentially numbered Official Receipts from a registered OR series. Auto-generating receipt numbers needs legal sign-off before Automated Self-Invoicing ships.
- IMPORTANT** **Dependency monitoring** — Anthropic API, Supabase, PayMongo, Google Cloud Vision each need health checks + graceful in-app fallback messages. No uptime monitoring tool defined (UptimeRobot or Better Uptime).
- IMPORTANT** **Data backup strategy** — Supabase point-in-time recovery needs explicit enablement on the paid plan + a tested restore procedure.
- IMPORTANT** **Session expiry UX** — graceful Taglish re-auth prompt when session expires mid-use, not a raw error state.
- IMPORTANT** **Incident response runbook** — what happens at 2AM on a BIR deadline day when the app goes down? Solo founder needs a written protocol even if it's just: detect → post status → rollback → fix.
- IMPORTANT** **Beta-to-paid transition** — Phase OC pilot users paying ₱99–₱199 need a defined migration path when Phase I launches at ₱299. Loyalty rate? Auto-upgrade? No mention in roadmap.
- IMPORTANT** **PWA installation UX** — no App Store listing means "Add to Home Screen" is non-obvious. Landing page and onboarding need an explicit install guide step.
- PLAN** **Admin observability** — Anton needs a way to see: active users, MRR, feature usage breakdown, Flag-as-Wrong queue. Even a Supabase dashboard + simple Retool view would suffice for MVP.
- PLAN** **Data retention policy** — NPC requires a defined retention period for churned users. Must be stated in Privacy Policy and enforced in the system (e.g., delete transactions after 1 year of inactivity).

1

UX Flow 1 — Registration & Kilala Kita Onboarding

From first landing to Dashboard. Covers Auth (email OTP), Privacy & Terms, and all 5 Kilala Kita steps including BIR opt-in branches and 3-path data bootstrap.

- **Review focus:** Does the BIR opt-in branch logic feel right? Are the 3 data bootstrap paths (Upload / GCash / Quick Start) in the right order? Should Terms acceptance happen before or after email verification?

- Green path — registered BIR user
- Orange path — informal seller, zero BIR features
- Yellow path — unsure, soft education only
- All paths merge at Data Bootstrap → AI Deepdive

2

UX Flow 2 — Daily Use Loop

Returning user from Dashboard through core feature interactions: receipt scanning, expense tracking, BIR deadlines (opt-in), and morning briefing. Includes AI loading states and error handling.

□ **Review focus:** Is the "Flag as Wrong" flow visible enough without being intrusive? Should the duplicate receipt warning be a hard block or a soft confirm? Does the AI downtime fallback feel right?

■ Fallback / error state — always shows graceful Taglish message

■ Warning / confirmation prompt

■ Hidden from informal sellers (bir_opt_in = false)

3

UX Flow 3 — Free → Pro Upgrade & Churn/Win-Back

Free tier limit hit, upgrade checkout, payment failure grace period, downgrade flow, and win-back email trigger. Includes the beta-to-paid transition path for Phase OC pilot users.

□ **Review focus:** Is 3 days the right grace period before downgrading a Pro user who hasn't paid? Should pilot users (₱99–₱199) auto-upgrade to Pro or be asked first? Does the win-back trigger (BIR deadline approach) feel right or too pushy?

- Pro user — full features active
- Grace period — 3-day window to resolve payment
- Downgraded — data preserved, access suspended
- Beta pilot transition path

4

OPS Flow 1 — Anton's Daily & Weekly Operating Rhythm

What Anton checks, when, and what decisions get made. Designed as a sustainable solo rhythm — total active time per week is estimated for each loop.

□ **Review focus:** Does this weekly rhythm feel manageable as a solo founder alongside a day job? Are there tasks here you'd want to delegate to a VA? Should the BIR calendar review be weekly or can it be monthly?

■ Daily — ~5 min/day ■ Weekly Support — ~30 min ■ Weekly Flags — ~30 min

■ Weekly BIR Calendar — ~15 min ■ Weekly Revenue — ~15 min

Total weekly active ops time: ~1.5–2 hours

5

OPS Flow 2 — Support Escalation & Incident Response

From user contact (WhatsApp/Viber) through triage, resolution, and postmortem. Includes the incident runbook for production outages — designed for a solo founder with no on-call team.

□ **Review focus:** For a P0 outage — are you comfortable with "post a status update to users then fix"? Should there be a simple status page (statuspage.io has a free tier)? Is the 24-hour trust incident response SLA achievable solo?

■ P0 Critical — immediate response, rollback available

■ Trust incident — 24h personal response SLA

■ P2 Support — answer + consider FAQ entry

6

OPS Flow 3 — MVP Sense Check Gate (Day 30–60)

The formal go/no-go decision process between Phase 1 and Phase 2. Three possible outcomes: proceed, iterate MVP, or return to discovery. Includes the Sense Check Memo deliverable.

□ **Review focus:** Are the gate thresholds realistic? Day 7 retention $\geq 40\%$ is ambitious for a new app — do you want to adjust? Should you share the Sense Check Memo with anyone beyond the co-founder?

- GREEN — proceed to Phase 2
- YELLOW — iterate MVP 2–4 weeks, then re-gate
- RED — do not proceed, return to discovery

Review Checklist — Before Incorporating into v7 Roadmap

- UX Flow 1: BIR opt-in branch logic confirmed
- UX Flow 1: Terms acceptance timing confirmed
- UX Flow 2: AI downtime fallback message approved
- UX Flow 3: Beta-to-paid transition rate/approach confirmed
- OPS Flow 2: 24h trust incident SLA confirmed
- UX Flow 1: Data bootstrap path order confirmed
- UX Flow 2: Flag-as-Wrong visibility confirmed
- UX Flow 3: Grace period (3 days) confirmed
- OPS Flow 1: Weekly rhythm is sustainable confirmed
- OPS Flow 2: Status page decision (yes/no)

☐ OPS Flow 3: Sense Check thresholds confirmed

☐ All 11 additional gaps reviewed and addressed
