

AKBai — Operations Playbook

UX Lifecycle · Business Operations · Process Flows · v8.0

 **DRAFT — FOR REVIEW**

UX 1: Onboarding UX 2: Daily Loop UX 3: Monetization & Churn OPS 1: Daily Rhythm
OPS 2: Support & Incidents OPS 3: Sense Check Gate

11 Additional Operational Gaps Identified in This Review

CRITICAL **OTP deliverability to Yahoo Mail PH** — common among target users. Needs custom

SMTP with warmed-up domain (not Supabase default SendGrid).

CRITICAL **Webhook idempotency for Xendit** — same payment webhook can fire twice on retry.

Handler must deduplicate by payment_id before processing.

CRITICAL **OR number generation legality** — BIR requires sequentially numbered Official

Receipts from a registered OR series. Auto-generating receipt numbers needs legal sign-off before

Automated Self-Invoicing ships.

IMPORTANT **Dependency monitoring** — Anthropic API, Supabase, Xendit each need health

checks + graceful in-app fallback messages. Note: Claude Haiku Vision replaces Claude Haiku

Vision — single dependency instead of two.

IMPORTANT Data backup strategy — Supabase point-in-time recovery needs explicit

enablement on the paid plan + a tested restore procedure.

IMPORTANT Session expiry UX — graceful Taglish re-auth prompt when session expires mid-

use, not a raw error state.

IMPORTANT Incident response runbook — what happens at 2AM on a BIR deadline day when

the app goes down? Solo founder needs a written protocol even if it's just: detect → post status →

rollback → fix.

IMPORTANT Beta-to-paid transition — Phase 0C pilot users paying ₱99–₱199 need a defined

migration path when Phase 1 launches at ₱299. Loyalty rate? Auto-upgrade? No mention in

roadmap.

IMPORTANT PWA installation UX — no App Store listing means "Add to Home Screen" is non-

obvious. Landing page and onboarding need an explicit install guide step.

PLAN Admin observability — Anton needs a way to see: active users, MRR, feature usage

breakdown, Flag-as-Wrong queue. Even a Supabase dashboard + simple Retool view would suffice

for MVP.

PLAN Data retention policy — NPC requires a defined retention period for churned users. Must

be stated in Privacy Policy and enforced in the system (e.g., delete transactions after 1 year of

inactivity).

USER EXPERIENCE FLOWS

1

UX Flow 1 — Registration & Kilala Kita Onboarding

From first landing to Dashboard. Covers Auth (email OTP), Privacy & Terms, and all 5 Kilala Kita steps including BIR opt-in branches and 3-path data bootstrap.

Review focus: Does the BIR opt-in branch logic feel right? Are the 3 data bootstrap paths (Upload / GCash / Quick Start) in the right order? Should Terms acceptance happen before or after email verification?

flowchart TD
A([User visits projectka.ph]) --> B[Enter email address]
B --> C[/Email OTP sent via Supabase Auth/]
C --> D{OTP correct?}

style BIR_A fill:#D5F5E3,stroke:#1E8449

Green path — registered BIR user

Orange path — informal seller, zero BIR features

Yellow path — unsure, soft education only

All paths merge at Data Bootstrap → AI Deepdive

UX Flow 2 — Daily Use Loop

Returning user from Dashboard through core feature interactions: receipt scanning, expense tracking, BIR deadlines (opt-in), and morning briefing. Includes AI loading states and error handling.

Review focus: Is the "Flag as Wrong" flow visible enough without being intrusive?

Should the duplicate receipt warning be a hard block or a soft confirm? Does the AI downtime fallback feel right?

```

```

Fallback / error state — always shows graceful Taglish message

Warning / confirmation prompt

3

UX Flow 3 — Free → Pro Upgrade & Churn/Win-Back

Free tier limit hit, upgrade checkout, payment failure grace period, downgrade flow, and win-back email trigger. Includes the beta-to-paid transition path for Phase 0C pilot users.

Review focus: Is 3 days the right grace period before downgrading a Pro user who hasn't paid? Should pilot users (P99-P199) auto-upgrade to Pro or be asked first? Does the win-back trigger (BIR deadline approach) feel right or too pushy?

flowchart TD
FREE[Free User in App] -->|FREE limit hit| LIMIT{Free limit hit?}

style PRO fill:#D5F5E3,stroke:#1E8449

UAT Pre-Launch Phase: Before public launch, 15–20 trusted testers receive access for

- 2-4 weeks. UAT uses a stripped stack: Supabase free + Cloudflare Pages free + Claude Haiku API only (no Sonnet, no Xendit, no WhatsApp Business API). Total UAT cost: ₱800.
- UAT users are not charged — they receive free access in exchange for structured feedback.
- UAT is a hard gate before Phase 1 public launch.

Pro user — full features active

Grace period — 3-day window to resolve payment

Downgraded — data preserved, access suspended

Beta pilot transition path

BUSINESS OPERATIONS FLOWS — SOLO FOUNDER (ANTON)

4

OPS Flow 1 — Anton's Daily & Weekly Operating Rhythm

What Anton checks, when, and what decisions get made. Designed as a sustainable solo rhythm — total active time per week is estimated for each loop.

- Review focus:** Does this weekly rhythm feel manageable as a solo founder alongside a day job? Are there tasks here you'd want to delegate to a VA? Should the BIR calendar review be weekly or can it be monthly?

```
flowchart TD
    subgraph DAILY ["* Daily Check — 5 minutes"]

Daily — ~5 min/day

Weekly Support — ~30 min

Weekly Flags — ~30 min

Weekly BIR Calendar — ~15 min

Weekly Revenue — ~15 min

Total weekly active ops time: ~1.5-2 hours

Infrastructure Upgrades — Cost-Triggered Milestones:

- Hosting: Vercel free (M1-6) → Cloudflare Pages ₱286/month (M7+)

- Database: Supabase free (M1-9) → Supabase Pro ₱1,430/month (M10+)

- WhatsApp Business API: ₱572/month activates at Month 7 (post-beta)

- Monitoring: Free tiers (PostHog, Sentry) maintained through Y3

5

OPS Flow 2 — Support Escalation & Incident Response

From user contact (WhatsApp/Viber) through triage, resolution, and postmortem. Includes the incident runbook for production outages — designed for a solo founder with no on-call team.

- **Review focus:** For a P0 outage — are you comfortable with "post a status update to users then fix"? Should there be a simple status page (statuspage.io has a free tier)? Is the 24-hour trust incident response SLA achievable solo?

flowchart TD
CONTACT([User contacts support
WhatsApp or Viber]) --> TRIAGE{Issue severity?}
TRIAGE -->|App not loading / data gone| P0[P0 — CRITICAL
Treat as production incident]
TRIAGE -->|Feature broken / wrong output| P1[P1 — DEGRADED
Log GitHub Issue · Fix within 48h]

end style INCIDENT
fill:#FADBD8,stroke:#E74C3C style TRUST_PROTO fill:#FDEBD0,stroke:#F59E0B style P0 fill:#E74C3C,color:#fff,stroke:#C0392B style P1 fill:#F59E0B,color:#fff,stroke:#D35400 style P2 fill:#F59E0B,color:#fff,stroke:#07101e style TRUST fill:#F59E0B,color:#fff,stroke:#D35400

P0 Critical — immediate response, rollback available

Trust incident — 24h personal response SLA

P2 Support — answer + consider FAQ entry

6

OPS Flow 3 — MVP Sense Check Gate (Day 30-60)

The formal go/no-go decision process between Phase 1 and Phase 2. Three possible outcomes: proceed, iterate MVP, or return to discovery. Includes the Sense Check Memo deliverable.

Review focus: Are the gate thresholds realistic? Day 7 retention $\geq 40\%$ is ambitious for a new app — do you want to adjust? Should you share the Sense Check Memo with anyone beyond the co-founder?

flowchart TD
TRIGGER([Day 30-60 post-MVP launch
Sense Check triggered]) --> PULL[Pull data from PostHog / Mixpanel]
PULL --> METRICS[Measure 8 signals]
subgraph SIGNALS ["8 Sense Check Signals"]
M1[Day 7 retention
Target: 40%+]

What worked · What did not · What Phase 2 prioritises]
MEMO --> SHARE[Share memo with co-founder
Align on decision before proceeding]
SHARE --> GATE{Gate decision}
GATE -->|All or most signals GREEN| GREEN_PATH[Proceed to Phase 2
Prioritise features by request signal rank
Top 3 requested features go first]
GATE -->|Mixed — some YELLOW signals| YELLOW_PATH[2-4 weeks targeted MVP iteration
Fix weakest signal only
Re-measure before Phase 2]
GATE -->|RED — core loop not validated| RED_PATH[Do not proceed to Phase 2
Return to user interviews
Run Phase 0C pilot protocol again with current MVP]
YELLOW_PATH --> GATE
RED_PATH --> DISCOVERY[User discovery sprint
New hypothesis → new pilot → re-gate]
GREEN_PATH --> P2_START([Phase 2 build begins
First feature: Sense Check top request])
style SIGNALS fill:#D6EAF8,stroke:#F59E0B
style GREEN_PATH fill:#D5F5E3,stroke:#1E8449
style YELLOW_PATH fill:#FEF9E7,stroke:#F9CA24

style RED_PATH fill:#FADBD8,stroke:#E74C3C style DISCOVERY fill:#F4ECF7,stroke:#7D3C98

GREEN — proceed to Phase 2

YELLOW — iterate MVP 2-4 weeks, then re-gate

RED — do not proceed, return to discovery

Review Checklist — Before Incorporating into v7 Roadmap

☐ UX Flow 1: BIR opt-in branch logic confirmed

☐ UX Flow 1: Data bootstrap path order confirmed

☐ UX Flow 1: Terms acceptance timing confirmed

☐ UX Flow 2: Flag-as-Wrong visibility confirmed

☐ UX Flow 2: AI downtime fallback message approved

☐ UX Flow 3: Grace period (3 days) confirmed

☐ UX Flow 3: Beta-to-paid transition rate/approach confirmed

☐ OPS Flow 1: Weekly rhythm is sustainable confirmed

☐ OPS Flow 2: 24h trust incident SLA confirmed

☐ OPS Flow 2: Status page decision (yes/no)

☐ OPS Flow 3: Sense Check thresholds confirmed

☐ All 11 additional gaps reviewed and addressed

Kaakbay mo sa negosyo.
