

⚠️ 11 Additional Operational Gaps Identified in This Review

CRITICAL

OTP deliverability to Yahoo Mail PH — common among target users. Needs custom SMTP with warmed-up domain (not Supabase default SendGrid).

CRITICAL

Webhook idempotency for Xendit — same payment webhook can fire twice on retry. Handler must deduplicate by payment_id before processing.

CRITICAL

OR number generation legality — BIR requires sequentially numbered Official Receipts from a registered OR series. Auto-generating receipt numbers needs legal sign-off before Automated Self-Invoicing ships.

IMPORTANT

Dependency monitoring — Anthropic API, Supabase, Xendit each need health checks + graceful in-app fallback messages. Note: Claude Haiku Vision replaces Claude Haiku Vision — single dependency instead of two.

IMPORTANT

Data backup strategy — Supabase point-in-time recovery needs explicit enablement on the paid plan + a tested restore procedure.

IMPORTANT

Session expiry UX — graceful Taglish re-auth prompt when session expires mid-use, not a raw error state.

IMPORTANT

Incident response runbook — what happens at 2AM on a BIR deadline day when the app goes down? Solo founder needs a written protocol even if it's just: detect → post status → rollback → fix.

IMPORTANT

Beta-to-paid transition — Phase 0C pilot users paying ₱99–₱199 need a defined migration path when Phase 1 launches at ₱399. Loyalty rate? Auto-upgrade? No mention in roadmap.

IMPORTANT

PWA installation UX — no App Store listing means "Add to Home Screen" is non-obvious. Landing page and onboarding need an explicit install guide step.

PLAN

Admin observability — Anton needs a way to see: active users, MRR, feature usage breakdown, Flag-as-Wrong queue. Even a Supabase dashboard + simple Retool view would suffice for MVP.

PLAN

Data retention policy — NPC requires a defined retention period for churned users. Must be stated in Privacy Policy and enforced in the system (e.g., delete transactions after 1 year of inactivity).

⚠️ AI Scope Boundaries & Financial Disclaimer

IN SCOPE: BIR compliance guidance, receipt/expense tracking, cash flow summaries, Taglish business communications, payment reminders, business onboarding, data bootstrap.

OUT OF SCOPE (redirect gracefully): Investment advice, legal disputes, audit services, medical queries, HR disputes, personal finance unrelated to MSME operations.

Financial Disclaimer (embedded in system prompt): "Paalala: Ang guidance na ito ay informational lang. I-verify mo sa iyong accountant o CPA bago mag-file." This disclaimer auto-appends to all tax-sensitive responses.

In-App Disclaimer: A persistent disclaimer banner must be visible in the chat UI at all times: "AKBai provides informational guidance only — hindi ito professional financial or tax advice."

Terms of Service: Users must explicitly agree that AKBai is not liable for any financial implications, BIR penalties, or business decisions made based on its outputs.

1

UX Flow 1 — Registration & Kilala Kita Onboarding

From first landing to Dashboard. Covers Auth (email OTP), Privacy & Terms, and all 5 Kilala Kita steps including BIR opt-in branches and 3-path data bootstrap.

≡ **Review focus:** Does the BIR opt-in branch logic feel right? Are the 3 data bootstrap paths (Upload / GCash / Quick Start) in the right order? Should Terms acceptance happen before or after email verification?

 Green path — registered BIR user

 Orange path — informal seller, zero BIR features

 Yellow path — unsure, soft education only

 All paths merge at Data Bootstrap → AI Deepdive

2

UX Flow 2 — Daily Use Loop

Returning user from Dashboard through core feature interactions: receipt scanning, expense tracking, BIR deadlines (opt-in), and morning briefing. Includes AI loading states and error handling.

≡ **Review focus:** Is the "Flag as Wrong" flow visible enough without being intrusive? Should the duplicate receipt warning be a hard block or a soft confirm? Does the AI downtime fallback feel right?

Receipt Scanning — Tier Breakdown: Free tier has 0 receipt scans/month (no scanning capability). Pro tier unlocks 50 scans/month (covers receipts AND notebook photos). Business tier allows 80 scans/month (covers receipts AND notebook photos). Free-to-Pro upgrade is a key upsell trigger when receipt scanning is needed. This is a core monetization signal.

≡ **Review focus:** Is the "Flag as Wrong" flow visible enough without being intrusive? Should the duplicate receipt warning be a hard block or a soft confirm? Does the AI downtime fallback feel right?

Receipt Scanning — Tier Breakdown: Free tier has 0 receipt scans/month (no scanning capability). Pro tier unlocks 50 scans/month (covers receipts AND notebook photos). Business tier allows 80 scans/month (covers receipts AND notebook photos). Free-to-Pro upgrade is a key upsell trigger when receipt scanning is needed. This is a core monetization signal.

-  Fallback / error state — always shows graceful Taglish message
-  Warning / confirmation prompt
-  Hidden from informal sellers (bir_opt_in = false)

3

UX Flow 3 — Free → Pro Upgrade & Churn/Win-Back

Free tier limit hit, upgrade checkout, payment failure grace period, downgrade flow, and win-back email trigger. Includes the beta-to-paid transition path for Phase OC pilot users.

≡ **Review focus:** Is 3 days the right grace period before downgrading a Pro user who hasn't paid? Should pilot users (P99–P199) auto-upgrade to Pro or be asked first? Does the win-back trigger (BIR deadline approach) feel right or too pushy?

UAT Pre-Launch Phase: Before public launch, 15–20 trusted testers receive access for 2–4 weeks. UAT uses a stripped stack: Supabase free + Cloudflare Pages free + Claude Haiku API only (no Sonnet, no Xendit, no WhatsApp Business API). Total UAT cost: ₱800. UAT users are not charged — they receive free access in exchange for structured feedback. UAT is a hard gate before Phase 1 public launch.

- Pro user — full features active
- Grace period — 3-day window to resolve payment
- Downgraded — data preserved, access suspended
- Beta pilot transition path

4

UX Flow 4 — Daily End-of-Day Check-In

All tiers, in-app only. Evening prompt to log daily sales and expenses in Taglish. Supports text entry, receipt photos (Pro), and notebook photos (Pro/Business).

≡**Design notes:** Language: Taglish throughout. Minimal fields — just total sales + total expenses (advanced breakdown optional). Completion target: 60 seconds. No push notifications in Phase 2; check-in only surfaces when app is opened.

- Core flow — always shown

- Confirmation message — instant feedback

5

UX Flow 5 — Weekly Reconciliation Prompt

Every Friday evening, in-app. AKBai checks for missing daily entries and prompts user to fill gaps. Includes quick-fill inputs and weekly summary confirmation.

≡ **Trigger:** Friday evening (7–10 PM based on user timezone). Only shown if 1+ days missing in past 7 days. Completion target: ~5 minutes for full week.

Soft prompt — 1-2 days
missing

Hard prompt — 3+ days
missing

6

UX Flow 6 — Excel / CSV File Upload (Pro Tier)

Pro and Business users can import transaction data from Excel or CSV files. Includes column mapping, preview, deduplication, and fallback template link.

≡**Scope:** Accepts .xlsx and .csv files. Max file size: 5 MB. Deduplicates against existing entries using date + amount + vendor combo. Links to AKBai template (Google Sheets).

 Preview step — user confirms before import

 Success — entries imported

 Error with template fallback link

7

UX Flow 7 — Google Sheets Live Sync (Business Tier, Phase 3)

Business tier users (M7+) can authorize AKBai to read their Google Sheets and auto-sync transactions. Includes OAuth flow, template validation, and recurring sync status.

≡ **Scope:** Phase 3 feature (Month 7+). OAuth read-only scope. Auto-sync on each daily briefing generation. Requires Date + Amount + Category columns. Template link provided if columns missing.

Connected — auto-sync
active

Setup phase — preview before
sync

Template validation — fallback link
provided

8

UX Flow 8 — Monthly Reconciliation & Summary

Last day of month. AKBai shows month-end summary, asks for corrections, and provides export/share options. All tiers, in-app.

≡**Timing:** Triggered on app open on the last calendar day of the month. Shows: total sales, total expenses, net profit, top 3 expense categories. Share to WhatsApp available M7+ only.

 Summary display — core data shown

 Correction flow — user can adjust

Feature Tier Matrix

Comprehensive feature breakdown across Free, Pro, and Business tiers. Updated with new UX flows and capability additions.

Feature / Capability	Free	Pro (₱399–₱399/mo)	Business (₱899–₱999/mo, M7+)
Daily Check-In (Taglish)	Yes (text only)	Yes (text + photo upload)	Yes (text + photo + auto-note from GSheets)
Morning Briefing	Teaser only	Full AI briefing	Full AI briefing + prioritization
Receipt Scanning (OCR)	No (0 scans/month)	Yes (50 scans/month, covers receipts + notebook photos)	Yes (80 scans/month, covers receipts + notebook photos)
Notebook Photo OCR	No	Yes (from 50-scan pool)	Yes (from 80-scan pool)
Chat with AKBai	10 messages/day (rate limited)	Unlimited	Unlimited
BIR Integration (if bir_opt_in=true)	Soft alerts only	Full: Deadline Watcher + Tanong Kay BIR	Full: Deadline Watcher + Tanong Kay BIR
Saan Napunta? (Expense Breakdown)	Basic view	Full with categories + trends	Full with categories + trends
Weekly Reconciliation Prompt	Yes (all tiers)	Yes (all tiers)	Yes (all tiers)
Monthly Summary Card	Yes (basic)	Yes (full with categories)	Yes (full with categories)
Excel / CSV Import	No	Yes (with column mapping)	Yes (with column mapping)
Google Sheets Template	Download only	Download + re-upload back	Live sync (auto-read on briefing generation)
GSheets Live Sync	No	No	Yes (M7+, read-only, auto-sync)

Feature / Capability	Free	Pro (₱399–₱399/mo)	Business (₱899–₱999/mo, M7+)
PDF Export (Monthly / Weekly)	No	Yes	Yes
Share to WhatsApp	No	No	Yes (M7+ only, share summary snapshots)
Data Retention	Full access while active	Full access while active	Full access while active
Support	Community FAQ	Email + WhatsApp support	Priority WhatsApp + dedicated support

Notes:

- **Scan Pool Coverage:** Pro and Business scan pools cover both receipt photos AND notebook/handwritten note photos. The pool is shared across all scan types.
- **M7+ (Month 7+):** Business tier features marked "M7+" launch in Phase 3 (Month 7) and include Google Sheets live sync and WhatsApp sharing.
- **GSheets Sync:** Business tier only. Requires read-only OAuth authorization. Auto-syncs on daily briefing generation. Validates required columns (Date, Amount, Category).
- **BIR Features:** Only shown to users with bir_opt_in=true. Informal sellers (bir_opt_in=false) see zero BIR-related features.

OPS Flow 1 — Anton's Daily & Weekly Operating Rhythm

What Anton checks, when, and what decisions get made. Designed as a sustainable solo rhythm — total active time per week is estimated for each loop.

≡ **Review focus:** Does this weekly rhythm feel manageable as a solo founder alongside a day job? Are there tasks here you'd want to delegate to a VA? Should the BIR calendar review be weekly or can it be monthly?

Compliance Note: NPC (Non-Profit Cooperative) registration is required pre-launch before Phase 1 public launch. This is a hard gate and must be completed during Phase OC pilot. Budget: ₱10,000 for registration and compliance setup.

Unit Economics: Pro LTV: ₱9,975 · Blended CAC: ₱110 · LTV/CAC ratio: 91x · Payback period: 0.4 months (12 days)

■ Daily — ~5 min/day

■ Weekly Support — ~30 min

■ Weekly Flags — ~30 min

■ Weekly BIR Calendar — ~15 min

■ Weekly Revenue — ~15 min

Total weekly active ops time: ~1.5–2 hours

Infrastructure Upgrades — Cost-Triggered Milestones:

- Hosting: Cloudflare Pages free (M1–6) → Cloudflare Pages ₱286/month (M7+)
- Database: Supabase free (M1–9) → Supabase Pro ₱1,430/month (M10+)
- WhatsApp: M1–M6 support uses personal WhatsApp with AKBai business name · M7+ switches to WhatsApp Business API ₱572/month
- Monitoring: Free tiers (PostHog, Sentry) maintained through Y3
- Pro Pricing Roadmap: Y1 ₱399/mo → Y2 ₱449/mo → Y3 ₱399/mo
- Business Tier Launch: Phase 2 / Month 13 (Y1 ₱899/mo → Y2 ₱899/mo → Y3 ₱999/mo, with 80 receipt scans/month)

OPS Flow 2 — Support Escalation & Incident Response

From user contact (WhatsApp/Viber) through triage, resolution, and postmortem. Includes the incident runbook for production outages — designed for a solo founder with no on-call team.

≡ **Review focus:** For a P0 outage — are you comfortable with "post a status update to users then fix"? Should there be a simple status page (statuspage.io has a free tier)? Is the 24-hour trust incident response SLA achievable solo?

■ P0 Critical — immediate response, rollback available

■ Trust incident — 24h personal response SLA

■ P2 Support — answer + consider FAQ entry

OPS Flow 3 — MVP Sense Check Gate (Day 30–60)

The formal go/no-go decision process between Phase 1 and Phase 2. Three possible outcomes: proceed, iterate MVP, or return to discovery. Includes the Sense Check Memo deliverable.

≡ **Review focus:** Are the gate thresholds realistic? Day 7 retention $\geq 40\%$ is ambitious for a new app — do you want to adjust? Should you share the Sense Check Memo with anyone beyond the co-founder?

 GREEN — proceed to Phase 2

 YELLOW — iterate MVP 2–4 weeks, then re-gate

 RED — do not proceed, return to discovery

OPS Flow 4 — BIR Knowledge Base Update Protocol

How to keep AKBai's BIR knowledge current. This is the real moat — a living knowledge base that compounds over time. Treat this as a production process, not an afterthought.

≡ **Review focus:** The system prompt contains BIR regulations that change multiple times per year (RR 7–2024, RR 16–2023, etc.). If the knowledge base is stale, AKBai gives wrong advice — the single worst trust failure mode. This protocol ensures updates happen before users encounter outdated information.

Weekly Monday BIR Check — 15 minutes

- Step 1** Check **BIR website** (bir.gov.ph/revenue-regulations) for new Revenue Regulations, Revenue Memorandum Circulars, or Revenue Memorandum Orders published in the past 7 days.
- Step 2** Check **Taxumo blog**, **JuanTax blog**, and **AccountaholicsPH** Facebook page for any BIR interpretation updates or community alerts about enforcement changes.
- Step 3** If a new regulation is found: read the full text, summarize the impact on MSMEs, and draft the Taglish explanation that AKBai should give when asked.
- Step 4** Update the **BIR knowledge base document** in the system prompt context. Run 5–10 Taglish test queries in the Anthropic Console to verify the updated response is accurate and natural-sounding.
- Step 5** Update the **bir_calendar** table in Supabase if any deadlines have changed (holidays, extensions, new filing requirements).
- Step 6** If the regulation is significant (affects >10% of users): draft an **in-app notification** in Taglish. Push to all affected users within 48 hours of BIR publication.

⚠ **Escalation Path:** If a new regulation is ambiguous or could cause AKBai to give incorrect advice, **disable the relevant response path immediately** and replace with: "May bagong BIR regulation na lumalabas. Kinukumpirma pa namin ang detalye. Para sa ngayon, i-consult mo ang iyong accountant o pumunta sa pinakamalapit na BIR office." Never serve uncertain BIR information — silence is safer than a wrong answer.

Scaling Note (500+ Users): At scale, this weekly manual check becomes a bottleneck. Phase 2+ consideration: build an automated BIR RSS/scrapper that flags new publications and drafts update recommendations for human review. For now (0–500 users), the manual Monday check is sufficient and keeps Anton as the quality gate for all BIR content.

OPS Flow 5 — Offline & Low-Connectivity UX Design

How AKBai behaves when the target user — a sari-sari owner or palengke seller — has spotty mobile data. Every AI feature requires an API call; the offline strategy determines whether AKBai feels broken or graceful when connectivity drops.

≡ **Build 1 Design Decision:** This is not a Phase 2+ feature — the offline behavior must be designed into the PWA architecture from Build 1. The service worker caching strategy and the queue system for offline actions are foundational decisions that cannot be retrofitted easily.

Offline-Capable Features (Phase 1)

≡ Can Work Offline

- View cached Dashboard (last-known data)
- View cached Morning Briefing (pre-fetched)
- Browse transaction history (cached in IndexedDB)
- Take receipt photos (queued for OCR when online)
- Manual expense entry (syncs when reconnected)
- View BIR deadline calendar (cached weekly)

≡ Requires Connectivity

- AI Chat (Claude API call required)
- Receipt OCR processing (Haiku Vision API)
- Real-time cash flow calculations
- Payment processing (Xendit)
- Push notifications
- Account creation / authentication

Implementation Decisions for Build 1

1. Pre-fetch Morning Briefing: When the user opens the app with connectivity, immediately fetch and cache the daily briefing in the service worker. If the user opens AKBai later on a jeepney with no signal, the briefing is already there. This one decision alone makes the app feel alive even offline.

2. Receipt Photo Queue: Allow users to take receipt photos offline. Store them in IndexedDB with a "pending OCR" flag. When connectivity returns, process the queue automatically and notify: "Na-scan na ang 3 resibo mo — check mo ang results." This prevents the worst offline moment: wanting to scan a receipt at a store with no WiFi.

3. Offline Chat Indicator: When the user taps "Ask AKBai" with no connection, show: "Walang internet ngayon — pero pwede kang mag-scan ng resibo o mag-record ng gastos. I-try ulit ang chat kapag may signal ka na." Never show a blank error screen or a generic browser offline page.

4. Cache BIR Deadlines Weekly: The bir_calendar table is small and changes rarely. Cache the full table every Monday during the BIR knowledge base check. This means deadline alerts work even offline — critical for users in areas with intermittent connectivity.

Review Checklist — Before Incorporating into v6 Roadmap

- | | |
|---|---|
| ☐ UX Flow 1: BIR opt-in branch logic confirmed | ☐ UX Flow 1: Data bootstrap path order confirmed |
| ☐ UX Flow 1: Terms acceptance timing confirmed | ☐ UX Flow 2: Updated scan counts (50 Pro / 80 Business) confirmed |
| ☐ UX Flow 2: Flag-as-Wrong visibility confirmed | ☐ UX Flow 3: Grace period (3 days) confirmed |
| ☐ UX Flow 3: Beta-to-paid transition rate/ approach confirmed | ☐ UX Flow 4: Daily check-in Taglish language confirmed |
| ☐ UX Flow 5: Weekly reconciliation prompt timing confirmed | ☐ UX Flow 6: Excel import column mapping logic confirmed |
| ☐ UX Flow 7: GSheets OAuth scope and template requirements confirmed | ☐ UX Flow 8: Month-end summary design and export options confirmed |
| ☐ Tier Matrix: All feature allocations across tiers confirmed | ☐ OPS Flow 1: Weekly rhythm is sustainable confirmed |
| ☐ OPS Flow 2: 24h trust incident SLA confirmed | ☐ OPS Flow 2: Status page decision (yes/no) |
| ☐ OPS Flow 3: Sense Check thresholds confirmed | ☐ All 11 additional gaps reviewed and addressed |

Kaakbay mo sa negosyo.
